# Pressure part inspection

For boilers and waste heat recovery systems

## Safeguard uptime by assessing your boiler's pressure part

For insights after an incident or – far better – a preventive analysis of your boiler's internal condition, rely on Alfa Laval. Over 100 years of marine boiler experience make us the right partner to inspect your boiler's pressure part. Besides identifying service needs that could impair performance or cause an unplanned shutdown, our experts can identify possible improvements.

Our service helps you with:

- Prolonged uptime and extended boiler lifetime
- Optimized maintenance with reduced costs
- Accurate insights before dry docking or repair work
- Recommendations for corrective actions, improvements or upgrades

## How it works

Periodic inspection of your boilers or waste heat recovery systems is a smart form of preventive maintenance. Especially when it comes to your boiler's pressure part, it can protect uptime against common failures. No one is more qualified for such inspection than our Alfa Laval service experts, who have deep knowledge of all boiler types.

Our inspection includes the following:

- Pressure part assessment for a clear understanding of your boiler's current condition
- Advice for handling immediate problems and avoiding future damage
- Recommendations for possible improvements or upgrades
- Documentation of our findings in a detailed inspection report

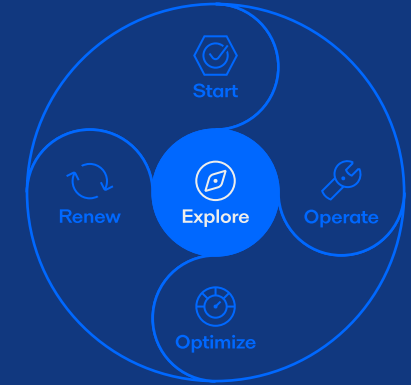

Our report can be used to take corrective actions. But it can also help you optimize maintenance schedules for performance and reliability.

With the knowledge it provides, the inspection will help extend boiler lifetime. As a pre-inspection, it can be used to prepare for dry docking or major repair work. In addition, it can aid in discussions with the classification society during reclassification or after a vessel purchase.

Engaging us for inspection is easy, because Alfa Laval's global service hubs are always close to your vessel. In whichever port you choose, our local office will have access to all the original equipment manufacturer (OEM) documentation. Together with our expertise, that ensures a top-class service.

## How the service can be delivered

-  On site
-  Remotely
-  At service centres
-  On board
-  In dry dock
